

A Brand New Moon

Our universe holds many mysteries and we've all heard about sunspots, possible ice on distant planets, even an intelligent-made face sculpture on Mars. Exciting as these things are, we must remember there are many other unanswered questions and threats to our existence from this vast universe. And just, maybe, our biggest threat might be less than a mere 300 thousand miles away. Earth has known the face on the moon to be one of tranquility, peacefulness, and even romance, but will that face ever change. Will the moon's face someday take on a frown, of anger? Since its creation it has controlled so many elements of Earth's life. Imagine looking to the night skies and not seeing the moon we know. Then imagine Earth's life without it. Your wildest imagination would pale in comparison to possible events brought on by A Brand New Moon.
