

Tales From the Wastes

The year is 2178. One hundred years ago, the world was plunged into a hell of nuclear fire as the Chinese and American governments began to launch nuclear missiles, and in a matter of minutes everything everyone knew was changed. Only a few people survived, and they have scraped up a meager means of survival for so long, that many people no longer even know there was another way of life. Decker, a scavenger, is sent out into the wastelands to gather more materials for one of the last surviving metropolises, Unity.
