

Tomorrows World: Britains Share in a Sustainable Future (Earthscan Library Collection: Sustainable Development Set)

20 per cent of the Earth's population currently consumes over 80 per cent of available resources. While most Westerners lead lives of unprecedented material comfort fuelled by spiralling consumption patterns, 1.3 billion people exist on less than US\$1 per day. As the first industrial nation and a former colonial power, Britain's record of overconsumption is one of the most notable. Researched and written by Friends of the Earth, *Tomorrow's World* argues that Britain must make deep cuts in resource consumption in order to allow developing countries to escape from poverty, and to prevent further breaches of environmental limits. It sets targets for reduced consumption levels, and shows how these can be met. In doing so, it demonstrates that significant goals in our society--health, employment, equality and a secure environment--are not determined by consumption, and that lower consumption levels can improve our quality of life
